Akarsh N

AI-Assisted Software Builder · B.E. CSE, class of 2029

akarshn.codes@gmail.com
linkedin.com/in/akarshncodes
github.com/akarshncodes
Dindigul, Tamil Nadu, India

SUMMARY

Second-year Computer Science student who turns problem statements into working, tested systems using AI development tools. Team lead at national-level hackathons: 2nd place at IGNITRRON'26, 4th at HackSprint'26, and two Smart India Hackathon 2026 entries. Seeking software, AI or product internships.

EDUCATION

B.E. Computer Science and Engineering — 2025 – 2029 (expected)
PSNA College of Engineering and Technology, Dindigul — **CGPA 8.47 / 10**

ACHIEVEMENTS

2nd place	IGNITRRON'26 National-Level Techno-Management Fest, KPR Institute of Engineering and Technology · ₹10,000 · team lead	Sep 2026
4th place	HackSprint'26 National-Level 24-Hour Hackathon, Velammal College of Engineering and Technology · ₹3,000 + shield	Oct 2026
Qualified	Smart India Hackathon 2026 · cleared both internal rounds as captain of Team Starks; submitted two ideas nationally	Sep 2026

PROJECTS

GoldenLine — Real-time emergency capacity coordination — SIH 2026 · SIH26198
Python · FastAPI · SQLAlchemy · Alembic · Alpine.js · github.com/akarshncodes/goldenline

- Built a platform linking families, ambulance helpers, hospitals and blood banks, with short-lived bed and blood-unit locks so two ambulances cannot claim the same bed.
- Delivered 17 functional-requirement modules backed by 175 automated tests; six-role web console with staff login, family OTP and 4 languages.

CHAKRAVYUH — AI anti-money-laundering investigation system — 2nd place · IGNITRRON'26
Python · NetworkX · LLM agents · Streamlit · github.com/akarshncodes/chakravyuh

- Led a team building entity resolution and network-level detection that caught 11 of 12 hidden laundering rings with zero false positives on the test dataset.
- Made code verify every fact in AI-written case reports (246 of 246 verified); built in 24 hours with a live demo.

NEER — Agentic AI for water-leak investigation — 4th place · HackSprint'26
LangGraph · MCP · WNTR · FastAPI · Streamlit · github.com/akarshncodes/NEER

- Designed six LangGraph agents using 19 tools across 4 MCP servers and a hydraulic digital twin to locate leaks and verify repairs, built in 24 hours.
- Enforced safety gates: human approval before every dig, and independent data-based verification before a case can close.

cadastra — AI urban parcel mapping from drone imagery — SIH 2026 · SIH26012
Python · Shapely · GeoPandas · Rasterio · MapLibre

- Fused six evidence sources into one boundary map that labels every edge as observed or inferred; output parcels 100% topologically valid.
- Measured 44.8–84.2% of boundary length invisible across four towns; observed edges correct 67.5% of the time vs 43.0% inferred.

Also built: SafeZone (WiFi-sensing access control on ESP32; IEEE-format paper drafted) · Strategy Lab (multi-agent NIFTY 50 paper-trading with full costs) · Habits (native Mac app, React + Tauri) · Hospital Management System (Java OOP).

SKILLS

AI development	Claude Code, phased prompt-driven builds, LangGraph multi-agent systems, Model Context Protocol (MCP)
Backend and data	Python, FastAPI, SQLAlchemy, NetworkX, GeoPandas, Streamlit, SQLite
Languages	Python, Java (OOP); C++ (learning)
Tools	Git, GitHub, Linux (Ubuntu), nginx and Apache setup
Product	Requirements documents, system design, phased build plans, pitch decks, team leadership
Certification	Claude 101, Anthropic
